

Report on Supporting Land Ecosystems through Action

University as a body have a policy to identify, monitor and protect any IUCN Red Listed species and national conservation list species with habitats in areas affected by the operation of your university

Year 2024-25

SDG-15

LIFE ON LAND

University as a body have a policy to identify, monitor and protect any IUCN Red Listed species and national conservation list species with habitats in areas affected by the operation of your university

The University identifies and protects species of conservation concern through its Biodiversity Conservation and Ecosystem Protection Policy and the campus biodiversity census that the policy requires.

The Eco Club records every plant, bird, animal and insect found on the campus in the census with its location and status, and species found to be vulnerable or threatened are checked against the IUCN Red List and the national conservation list.

Any species that is listed is entered in the biodiversity register with its habitat, and the University protects that habitat by keeping construction and landscaping away from it, by not disturbing nests and breeding areas, and by stopping unnecessary use of chemical pesticides.

The Eco Club reports any threat to such species to the University authority, and the census is repeated every three years to see whether their status has changed.

The policy is attached.

DOCUMENTS REQUIRED

- ✓ Policy to identify, monitor and protect IUCN Red Listed species and national conservation list species with habitats in areas affected by the operation of the university
