

Report on Relationships to Support the Goals

**University as a body participate in international
collaboration on gathering or measuring data for the
SDGs**

Year 2024-25

SDG-17

PARTNERSHIPS FOR THE GOALS

University as a body participate in international collaboration on gathering or measuring data for the SDGs

Faculty of the School of Sciences and the School of Agriculture collect environmental, agricultural and public-health data that bears on SDG indicators, and the University encourages this work to be done with international research partners where possible.

School of Sciences faculty have contributed to environmental and biodiversity data collection relevant to international SDG-tracking datasets, and School of Agriculture faculty have worked on agricultural and soil-health studies with or informed by international sustainable-farming research networks.

The Research and Development Cell helps with the agreement side, including MoUs, ethics clearance and tracking of research output, and the results, whether co-authored publications, shared datasets or joint reports, are recorded and reported to the IQAC.

The international research MoUs or collaboration agreements, the co-authored publications with international partners and the Research and Development Cell collaboration log are attached.

DOCUMENTS REQUIRED

- ✓ International research MoUs or collaboration agreements
- ✓ Co-authored publications with international partners
- ✓ Research and Development Cell collaboration log
