

Report on Relationships to Support the Goals

University as a body, through international collaboration and research, review comparative approaches and develop international best practice on tackling the SDGs

Year 2024-25

SDG-17

PARTNERSHIPS FOR THE GOALS

University as a body, through international collaboration and research, review comparative approaches and develop international best practice on tackling the SDGs

Faculty doing SDG-related research are encouraged to compare how different countries and institutions deal with the same problem, and to include a comparative review of literature and practice in the design of their research. The findings are published in peer-reviewed journals and presented at conferences, and where they apply directly, they are fed back into the University's own practice, for example into the Green Campus Initiative or the School of Agriculture's extension methods.

School of Sciences and School of Agriculture publications have drawn comparative lessons from international sustainable development and natural farming practice, and School of Management Studies research has looked at comparative approaches to sustainability governance in business and public policy. The Research and Development Cell supports the collaboration and the IQAC records the outputs.

The publications with a comparative or best-practice angle, the conference presentation records and the instances where research findings were applied to university practice are attached.

DOCUMENTS REQUIRED

- ✓ Publications with comparative/international best-practice framing
- ✓ Conference presentation records
- ✓ Instances where research findings were applied to university practice
