PARTNERSHIPS FOR THE GOALS

University's progress against SDG12: Responsible Consumption and Production

The University's contribution to responsible consumption comes from its plastic-waste reduction policy, its Waste Management System and its preference for regional and, where possible, sustainable suppliers.

The plastic policy restricts single-use plastics at the point of purchase and provides plastic collection points, the Waste Management System covers segregation, collection and disposal of solid, hazardous and biomedical waste, and campus catering sources from regional suppliers. The details are in the plastic-waste and waste-disposal metrics of SDG 15.

The documents listed against those SDG 15 metrics are attached.

DOCUMENTS REQUIRED

- ✓ Documents listed against the SDG 15 metrics on plastic-waste reduction (15.4.2) and waste disposal (15.4.3)
- ✓ Food procurement and local sourcing documents (2.5.4 and 15.2.2)
