

Report on Education for the SDG's

University as a body have dedicated courses that address sustainability and the SDGs

Year 2024-25

SDG-17

PARTNERSHIPS FOR THE GOALS

University as a body have dedicated courses that address sustainability and the SDGs

The School of Sciences offers a B.Sc. Environmental Science programme whose curriculum is built largely around sustainability, ecosystems and environmental management, and the School of Agriculture teaches sustainable and natural farming in its programmes.

Both are delivered through normal teaching, assessment and practical or field work in the academic year. Other Schools are encouraged, through the Board of Studies curriculum-review process, to develop dedicated electives on sustainability that suit their disciplines, such as sustainable engineering design, sustainable business practice or health-systems sustainability, and discussion on these is going on in several Schools.

The Environmental Science and Agriculture programme curricula and syllabi and the Board of Studies approval records for sustainability-focused courses or electives are attached.

DOCUMENTS REQUIRED

- ✓ Environmental Science and Agriculture programme curricula/syllabi
- ✓ Board of Studies approval records for sustainability-focused courses or electives
