

Report on Education for the SDG's

University as a body measure the sustainability literacy of students

Year 2024-25

SDG-17

PARTNERSHIPS FOR THE GOALS

University as a body measure the sustainability literacy of students

The University measures sustainability literacy through the examinations and project assessments of its Environmental Science and Agriculture sustainability coursework, which show how well enrolled students have understood the subject.

For the wider student body outside these courses, feedback and knowledge-check instruments are used at NSS and Eco Club sessions on the SDGs, and coordinators are encouraged to run simple pre and post checks at these sessions. The IQAC brings the results together in a sustainability-literacy review.

The course-assessment outcome summaries for Environmental Science and Agriculture, the NSS and Eco Club session feedback or knowledge-check records and the IQAC consolidated sustainability-literacy review are attached.

DOCUMENTS REQUIRED

- ✓ Environmental Science and Agriculture course-assessment outcome summaries
- ✓ NSS/Eco Club session feedback or knowledge-check records
- ✓ IQAC consolidated sustainability-literacy review
