

Report on National Hunger

University as a body provide access to university facilities to local farmers and food producers to improve sustainable farming practices

Year 2024-25

SDG-2	ZERO HUNGER
University as a body provide access to university facilities to local farmers and food producers to improve sustainable farming practices	

Farmers and food producers from outside the University can use the School of Agriculture's facilities and not only attend its events. A farmer can submit soil samples to the soil testing laboratory and receive a report on soil condition and nutrient status, which helps in planning fertilizer use and crop choice.

Access extends to the department's other laboratories, to the technology it uses, and to its plant stocks, and farmers can also draw on the expertise of the faculty in soil science, agronomy and related fields. Use of these resources by outside farmers is governed by the University's guidelines for access to university resources.

The facilities access report shows which laboratories, technology and plant stocks were accessed, and the guidelines are attached with it.

DOCUMENTS REQUIRED

- ✓ Agriculture Department facilities access report for laboratories such as the soil testing lab, technology usage and plant stocks
- ✓ Guidelines for access to university resources
