

Report on Student Access Measures

**University as a body encourage applications by women
in subjects where they are underrepresented**

Year 2024-25

SDG-5

GENDER EQUALITY

University as a body encourage applications by women in subjects where they are underrepresented

Fewer women apply to Engineering and other technology programmes at the University than to Sciences, Pharmacy, Design, Agriculture or Management Studies, so outreach effort is concentrated there. Women faculty and senior women students represent Engineering at school outreach events, open days and admission counselling, and the counselling material carries the experiences of women students in these programmes, so that girls and their parents see women already studying them.

Women faculty also attend conferences outside the state and abroad, and the details of those attended in 2024-25 are attached with photographs. Women in STEM carry out outreach activities outside the state or country, such as seminars and industrial visits, which are documented in the same way. The University's MoUs with other universities, NGOs and government bodies in 2024-25 is listed with photographs.

Admission details of female students in Mechanical and Electrical Engineering and in any other unique programme show whether the effort is bringing more women in, and the School of Engineering reviews these figures against the application data.

DOCUMENTS REQUIRED

- ✓ Details of conferences attended by female faculty outside the state/country, with photographs, 2024-25
- ✓ Outreach activity details by women in STEM outside the state/country (seminar/industrial visit), with photographs, 2024-25
- ✓ MoUs with other universities/NGOs/government bodies, with photographs, 2024-25
- ✓ Female students' admission details in Mechanical and Electrical Engineering and any other unique programme, 2024-25
